WORK OF THE BUREAU DURING THE FISCAL YEAR ENDED JUNE 30, 1911.

WORK OF THE WEATHER BUREAU DURING THE FISCAL YEAR ENDED JUNE 30, 1911.

I. MANILA CENTRAL OBSERVATORY.

1. WORK OF THE CENTRAL OBSERVATORY.

(*a*) **Meteorological department.**—Comparatively little has to be said of the special work of this department during the year, though it is by far the most important of the Bureau. The great bulk consists of routine work which remains the same year after year.

A slight change was made in the length of office hours, for while up to the present year, at least one employee was kept constantly in the office "on guard" from 6 a. m. to 7 p. m., but now the time has been shortened to 6 p. m. during the hot season and on all Sundays, Saturdays, and official holidays during the year. The overtime put in by the employees during the fiscal year amounted to 1,340 hours 50 minutes, or 191.5 working days of 7 hours each.

The services required of the Weather Bureau are continually increasing. Since October, 1910, it is furnishing to the irrigation division, Bureau of Public Works, the rain observations of all its stations within 30 days after the close of the month. The records for July, August, and September have likewise been supplied. In exchange, the Bureau of Public Works agreed to favor us with a copy of the rainfall data collected by the irrigation division.

October 1, 1910, the Central Office began to mail to the observatories of Tokio, Zikawei, Hongkong, and Phulien a daily bulletin giving pressure, temperature, wind, state of the sea, and weather as observed at 6 a. m. and 2 p. m. in Manila and many of the secondary stations of the Weather Bureau which report by wire.

The United States Weather Bureau requested that to the daily cablegram transmitting the 8 a. m. observations of Manila sent during the preceding year be added the observations made at Nemuro (Japan) and Shanghai on the preceding afternoon. This was done beginning with April 1, 1911. But later, the morning observations of the two foreign stations were desired, though this delays the cablegram until noon, since these are not received earlier. The new arrangement went into effect on May 6, 1911.

The number of barometers compared is 231, against 247 during the preceding year.

As to typhoons, the fiscal year 1911 was comparatively calm, the number of typhoon warnings sent to each of the five meteorological centers in the Far East having been only 94, while during the last fiscal year they reached 106. The greatest number was sent during September and October, 1910 (20 each), while none were indicated during January and May. As a rare exception, two became necessary in February, owing to a typhoon in the Western Carolines.

Capt. Frank Wheeler of the steamship *Kumsang* made arrangements to have special storm warnings cabled at his expense to his address at Singapore whenever he requests them.

(*b*) **Astronomical department.**—The work of this department consisted mainly in repeated careful examination of the constants of the transit instrument and frequent observations for the determination of the clock error for both the time service and the rating of chronometers, of which latter 41 have been compared. This is a gain of 14 over last year, and of 17 over the fiscal year 1909. The correct time has repeatedly (6 to 8 times) been requested by United States ships at Guam. As there is no telegraphic connection between the Observatory and the office of the Commercial Pacific Cable Company, this involves expense and trouble, as it is necessary to send an observer and chronometer to the cable office; but, of course, the service has been rendered without complaint.

For the Bureau of Science was prepared a statement giving the exact times when the sun passes through the zenith at various points of the Islands. At the request of the same Bureau, a series of observations were made with the Angström pyrheliometer during the months February to May, 1911. As the instrument, which had been damaged during the first experiments two years ago, had been repaired in our mechanics' shop with no means for standardizing it, only relative values could be obtained, which, however, sufficed for the purpose of the investigator for whom the observations were made.

(*c*) **Seismic department.**—While during the preceding year the number of perceptible earthquakes in the Philippines was exactly the annual average, to wit, 121, the fiscal year 1911 was characterized by a greatly increased seismic activity, the number of earthquakes sufficiently strong to be felt having been 188, an increase of 55.4 per cent. In this number are not included those in connection with the eruption of Taal Volcano on January 30, 1911, which will be mentioned later, nor, of course, 8 earthquakes reported by our station on Guam, since the latter took place outside of our Archipelago. The above 188 seismic disturbances were distributed as follows: Batanes and northern Luzon, 19; southern and southeastern Luzon and Mindoro, 20; the Visayan Islands, 37; western and central Mindanao, 7; eastern Mindanao, 105.

Fortunately none of these earthquakes showed destructive violence. The most intense, viz, one of force VII–VIII and three of force VII (De Rossi-Forel scale), occurred in eastern Mindanao, which region had likewise the greatest frequency. Their centers lay in the Agusan River Valley and the southwestern region of the mountain system of Apo Volcano.

Of the number mentioned, the Manila seismographs registered 53 of the more important. As most of the shocks whose intensity exceeded degree IV were of tectonic origin, their waves reached Europe and America, where they were registered at several seismological observatories.

In addition to the 53 perceptible earthquakes, and exclusive of the Taal perturbations, the seismographs of Manila Observatory registered 244 microseismic disturbances. Of these, 176 corresponded to shocks which had their origin within, or close to, the Archipelago—that is to say, within a radius of 1,000 kilometers having Manila as center; 56 came from centers at distances ranging from 1,000 to 4,000 kilometers; 9 from such at distances of 4,000 to 10,000 kilometers; and 3 were due to earthquakes in Africa, Mexico, and Colombia, respectively, at distances exceeding 12,000 kilometers.

The two seismographs installed at Baguio, one of the Vicentini type, the other an Omori horizontal pendulum apparatus, both constructed by our mechanics, registered about the same number of seismic disturbances as those at Manila. A difference is noticeable only when the shocks are almost purely local, proceeding from centers within less than 100 kilometers from either observatory.

Taal Volcano.—From January 27 to February 25, 1911, the Manila seismographs recorded, in addition to those already mentioned, 1,005 volcanic earthquakes having their origin in Taal Volcano which was then in eruption. The meteorological and seismic

aspects of the disastrous outbreak of January 30, 1911, are discussed in a monograph prepared by Rev. Miguel Sadera Masó, S. J., in charge of the seismic department. Of the 1,005 tremors registered, 3 or 4 were perceptible up to a distance of 300 kilometers from the epicenter, 62 up to 200 kilometers, 71 to 100 kilometers, 151 to 50 kilometers, and the rest only in the immediate neighborhood of the volcano. This is undoubtedly one of the first instances in which modern seismographs happened to be installed sufficiently close to a volcano (63 kilometers) to have recorded all the seismic disturbances which accompanied the destructive eruption.

Aside from the list of earthquakes in the Monthly Bulletin and the advance report which is regularly sent to 70 of the principal seismological observatories of America, Asia, Australia, and Europe within 10 days after the close of the month reported on, the following special papers have been published: Preliminary Notes on Subterranean or Seismic Noises (Bulletin for June, 1910); The Seismic Centers of Samar, Leyte, and Eastern Mindanao (August, 1910); and Catalogue of Philippine Earthquakes, 1910 (December, 1910, appendix).

A great number of photographic prints have been made from seismograms of earthquakes registered throughout the world, and been forwarded to the International Bureau of Earthquake Investigation at Strassburg, as well as to other observatories and prominent seismologists who requested them.

(*d*) **Magnetic department.**—Though the first observations at the new magnetic observatory, Antipolo, were made in May, 1910, in connection with the nearest approach of Halley's comet to the earth, there were so many interruptions that the regular work may be said to have commenced only toward the close of the calendar year 1910. One of the serious difficulties was to obtain a steady light of sufficient power for photographic registration. No suitable source being obtainable in Manila, the mechanics finally constructed a lamp which burns gasoline and has thus far given entire satisfaction. Another perplexing problem was how to reduce to a few tenths of a degree the large daily oscillation of temperature which was found to take place within the magnetic pavilion. As there is only a rain observer stationed at Antipolo, it is not to be expected that he is capable of making the necessary experiments, and, hence, a great amount of time was consumed by them, as they necessitated frequent trips between Manila and Antipolo.

The beginning of the magnetic observations at the new site brought a surprise; the values obtained at Antipolo differed considerably from those observed at Manila in 1904, before the old observatory was ruined by the electric railway. This discrepancy might be due solely to secular changes of the magnetic elements during the period 1905 to 1910; but it might just as well indicate the presence of disturbing factors in the geological formations of the Antipolo Range. The simplest solution would have been to make a series of observation at the old and new sites, had it not been for the fact that the electric street cars render observations at Manila impossible. Hence, various points had to be selected in the neighboring provinces to the north and south of Antipolo, at which to make magnetic observations to check those of Antipolo. These soon showed that the discrepancies were due solely to secular variations of the magnetic elements.

To make doubly sure of this, application was made to the Director of Coast and Geodetic Survey for the magnetic observations made by his Bureau in southern Luzon, in order to compare them with ours. We are very thankful to the said gentleman who not only supplied a copy of all the data on hand (some 1,909), recomputed and fully prepared for our purpose, but likewise offered the loan of a magnetometer to enable us to make simultaneous observations at two points. As this instrument was at the time employed in Jolo and Mindanao, this plan could not yet be carried out. Thanks, however, to the generous aid given by the Bureau of Coast and Geodetic Survey, it is even now well-nigh absolutely certain that there is no perturbing element in the vicinity of

the magnetic observatory, but that the values obtained represent the true actual state of terrestrial magnetism in this region of Luzon.

Ever since, the variometers have worked satisfactorily, and the data concerning the disturbed and calm days of every month have been sent trimonthly to the Royal Meteorological Institute of the Netherlands for publication in the bulletin of the International Commission on Terrestrial Magnetism. Special data of magnetic perturbations and copies of the corresponding magnetograms have likewise been forwarded to the said commission, and also to other parties if requested.

Though all the elements for the reduction of the variometer records to absolute values have been secured, it has been decided not to begin this work until our instruments for absolute measurements have been standardized by comparison with those of the Commission on Terrestrial Magnetism of the Carnegie Institution, which is expected to pass through Manila about December, 1911.

Pending this standardization, the provisional means of the absolute magnetic values at Antipolo (121° 10′ E; 14° 38.8′ N) are: Declination, 0° 39.77′ E; horizontal component, 0.38244 C. G. S.; dip, 16° 17.2′.

2. IMPROVEMENTS.

A considerable sum has been expended from the private funds of Manila Observatory for improvements in connection with the Central Observatory and its dependencies, Mirador Observatory, Baguio, and the Magnetic Observatory, Antipolo.

(*a*) **Manila Observatory.**—*Accessories to the telescope.*—The 19-inch equatorial telescope has been equipped with additional eyepieces, an ocular scale micrometer, and four microscopes for reading the circles—all made by Carl Zeiss of Jena, Germany, at a cost of ₱420.

The Wiechert seismograph.—Although the Vicentini universal microseismograph, which has been working in the Observatory since 1902, has given complete satisfaction (even greater than it is said to give elsewhere), and the horizontal pendulum seismograph (system Omori) constructed by our mechanics under the direction of Rev. Miguel Saderra Masó, Assistant Director in charge of the seismological and magnetic departments, give excellent results, it was decided to procure a Wiechert seismograph of the latest and most approved construction. For, not only is the large model of the Wiechert instrument considered as the most perfect seismograph at present, but instruments of this type are working or being installed at 7 seismological observatories in the Far East and Australia. The new apparatus was to enable us to compare the records of those places directly with those traced at Manila.

The new seismograph is the work of Georg Bartels, Göttingen, Germany. The mass of the pendulum is 1,000 kilograms, the period of oscillation has been adjusted to 7–9 seconds, the magnification is 100, and the damping 4:1. These constants appeared to be the most preferable for this region with its frequent local and near-by disturbances. The instrument is mounted in a pavilion constructed for the purpose in the old meteorological park, where it has been working regularly since the end of December, 1910.

The Wiechert type of seismograph is known to be difficult of adjustment and to require a great deal of care. In fact, there was considerable trouble in obtaining a period of oscillation sufficiently large, and the temperature changes during February to May affected the apparatus adversely. But this defect is being remedied.

(*b*) **Baguio.**—At Mirador Observatory no improvements have been made in the equipment at private expense. The telephone line which connects the lone mountain top with the city was constructed by the Bureau of Public Works and paid for by the Weather

Bureau, ₱150 having been transferred for the purpose from its appropriation to that of the Bureau of Public Works. The advantages derived from this connection by both the observatory and the town many times outweigh the cost. On the one hand, the advices telegraphed by the Central Observatory can be immediately transmitted to Mount Mirador without the services of a messenger, and on the other, anyone desiring information can obtain the same without more trouble than ringing up the Weather Bureau station.

Some ₱500 have, however, been expended by the observatory in beautifying the grounds. While this is by no means for the exclusive benefit of the Weather Bureau, it adds a certain dignity to Mirador Observatory.

(*c*) **Antipolo.**—As stated last year, the magnetic observatory consisted then of two small buildings of stone, one for photographic registration, the other for absolute measurements of the magnetic elements. But it soon became evident that a house was badly needed. Not only was it very desirable that the observer live on the premises, otherwise completely deserted, but such officers as had occasionally to visit the observatory and even remain there for several days had no place where to stay. Hence, it was resolved once for all to provide not merely for the present, but for all probable future needs by constructing a strong-material house containing five rooms and a chapel. The total cost of this building is ₱6,250, while an additional sum of about ₱300 was spent in cleaning the grounds, making paths, etc. Aside from the great convenience to the personnel of the Weather Bureau, the appropriation for the latter gains by the fact that 50 per cent of the legal per diems is the limit allowed to officers and employees while staying at the magnetic observatory.

II. SECONDARY STATIONS.

1. **Baguio.**—During the hot season three employees of the Central Office were stationed at Mirador Observatory for periods varying from one to three months. They were supposed to be preparing copy for the annual (scientific) report, a task which can be done away from Manila. But such was the frequency of visitors that they could do very little else than show them around, and this despite the fact that two Jesuit priests who had formerly been connected with the Weather Bureau, and were then at Baguio for a vacation, occasionally helped them.

2. **Changes in stations.**—For years it had been the intention of the Weather Bureau to reëstablish the station at Daet, Camarines, as soon as this town would obtain telegraphic communication with Manila. But the development of Paracale, within the same province, and its connection with the telegraph system, offered a very superior site for a station. Lying farther north than Daet, and having a view of the sea, it is of the greatest utility in following the movements, etc., of typhoons which approach northern Luzon. Hence, a second-class station was established there on September 23, 1910.

On account of its importance for the early detection of typhoons coming from the Pacific Ocean in the latitudes of the Visayas, Borongan, hitherto a rain station, has been raised to third-class, April 1, 1911. Rev. Cesareo Montes, O. S. F., who actually rendered services not expected from a rain observer, had resigned, and it is but fair that his successor, who is neither priest nor religious, be paid the full value of his work.

A petition of the inhabitants of Guiuan, Samar, personally recommended by the assemblyman for the district, which requested a meteorological station in that town, resulted in the establishment of a rain station on April 27, 1911. While of no use for forecasting typhoons, as there was no telegraph station in the place, yet it was a good opportunity for having a station in southern Samar, as it is the easternmost station

and as such will be of considerable value for the subsequent study of typhoons in their early stages or while still at some distance from the Archipelago, especially of such as strike the Philippines in comparatively low latitudes.

3. **Stations of the Weather Bureau.**—On June 30, 1911, the Weather Bureau maintained the following stations: One branch observatory, 1 magnetic observatory, 7 first-class, 10 second-class, 25 third-class, and 9 rain stations.

Volunteer stations.—With the exception of Catbalogan, Samar, which is in charge of Dr. G. J. Cullen, district health officer, not one of the volunteer stations gave satisfaction, save those which are under the supervision of United States Army officers. These are Fort Wint, Grande Island; Fort Mills, Corregidor Island; Infanta, Tayabas; Ludlow Barracks, Parang; and the experimental farm of the subsistence department, Camp Vicars, Mindanao. Unfortunately, the said experimental farm was abandoned and thus the observations ended, the instruments being returned in the beginning of May, 1911. None of the nine other volunteer stations sent its reports regularly, most of them not at all.

4. **Inspection of stations.**—Although no trips have been undertaken for the purpose of inspection, one first-class, two second-class, and two third-class stations have been visited. During April, 1911, Mr. P. Fajardo Marmoril, assistant observer at the Central Observatory, had to go to Santo Domingo, Batanes, on private business. He kindly consented to inspect the first-class station at Aparri and the third-class station at Santo Domingo. At Aparri he found things in good shape, only the rain gauge had to be moved to a different spot.

The second-class station at Vigan and third-class station at Batangas were for some time in charge of employees sent from Manila to replace the absent observers. In both stations the substitutes found things satisfactory.

During a vacation trip to the south, Mr. Vicente C. Santos kindly inspected the second-class station at Calbayog. He determined the height of the barometer cistern above sea level and found the value of 4.1 meters given hitherto too small, the true height being 5.5 meters. The surface of the mercury in the barometer cistern and the metal scales of the thermometers were found to be oxidized.

III. MISCELLANEA.

1. **Fires at secondary stations.**—Since the beginning of the calendar year 1911, two meteorological stations have been destroyed by fire. Luckily, both were rain stations whose equipment is, naturally, less costly than that of stations of a higher class.

(*a*) *Tarlac.*—On January 29 a fire in the town of Tarlac, in the province of the same name, involved also the meteorological station. Besides books and records, there were burned meteorological instruments to the value of ₱50.30; only the rain gauge and thermometers, being mounted in an open space, escaped destruction.

(*b*) *Silang.*—Worse was the fate which befell the station at Silang, Cavite, on March 31. Here everything fell a prey to the flames, except a typhoon barometer which the observer carried off in a damaged condition. The loss to the Weather Bureau amounted to ₱79.83, exclusive of books and records.

2. **Interruptions in the series of observations.**—As to continuity in the series of observations made at the secondary stations, this fiscal year was the worst in the history of the Weather Bureau. With the first and second class stations there was little trouble. None of the incumbents resigned, while those absent on leave could be replaced by a substitute sent from the Central Observatory, unless in the case of first-class stations the assistant could be intrusted with the routine work, for which he received the pay

of a temporary third-class observer. But at third-class and rain stations the interruptions were frequent. Taking into account only those at which the interruption exceeded one month, we obtain the following list:

Station.	Interruption.
	Months.
San Jose de Buenavista, third class	1.5
Cotabato, third class	2
Baler, rain station	2.5
Jolo, third class	4
Romblon, third class	5.3
Gubat, rain station	8.3
Laoang, third class	8.7

Plan to spread typhoon warnings.—Since the establishment of the Weather Bureau several ways have been tried to secure a wider distribution of storm warnings than can be obtained by telegraphing them to the stations of the Bureau, but none of them proved a success. It has been suggested that the following plan would probably be more successful than any one devised hitherto: In each case of a typhoon, the warnings should be wired to the governors of those provinces which are threatened by it, unless there is in the capital a meteorological station of at least third class, the governors having strict orders from the Honorable the Governor-General to decipher the message by means of a code furnished to them by the Weather Bureau, and to wire the salient part of it, in ordinary language and at the expense of the province, to the municipal president or other designated official of every town in the province having a telegraph station, except such as have a meteorological station of Classes I to III. The telephone and messenger service should likewise be utilized for the purpose. The local official should be ordered to warn his district to the fullest extent possible by such means as are at his disposal.

As regards provincial capitals at which stations of the proper class are situated, the same order should be issued to the governor and respective local officials, but the warnings would be telegraphed to the observers, as hitherto, since these are even now under the strict obligation of immediately informing the authorities whenever a dispatch implies that the region is in danger.

Since such warnings would be for the immediate benefit of the province, it would seem only fair that the province bear the cost of spreading them, the message from the Central Observatory to the governors or observers being, of course, paid by the Weather Bureau.

PART II.

HOURLY METEOROLOGICAL OBSERVATIONS MADE AT THE CENTRAL OBSERVATORY DURING THE CALENDAR YEAR 1911.

INTRODUCTION.

Part II of our report for 1911 contains the meteorological observations made during the year at the Central Observatory at Manila. The hours of observations are given in Insular standard time; that is, in the time of the one hundred and twentieth meridian east of Greenwich, adopted by order of the United States Government on September 6, 1899. It is to be noted that the observations of atmospheric pressure, temperature, relative humidity, vapor tension, and the direction and force of the wind are hourly, read directly between the hours 6 a. m. and 7 p. m., while for the hours from 8 p. m. to 5 a. m. they are taken from self-registering apparatus. The hourly observations of the direction, form, and amount of clouds are made from 7 a. m. until 6 p. m. only. Each of the tables of hourly observations shows also the respective hourly, daily, and monthly means. The extreme daily values of the various elements, together with the time of their occurrence, are united into a separate table. The thermometers and atmidometer are placed in the observatory park, 1.5 meters above the ground.

The readings of the barometer have not been corrected for gravity; this correction would be —1.72 mm.

All observations contained in this report are expressed in the metric system, continuing the practice adopted at the time of the reorganization of the Weather Bureau. As in former reports, we have arranged the observations according to month.

EXPLANATION OF SYMBOLS (BEAUFORT'S LETTERS AND INTERNATIONAL WEATHER SYMBOLS).

Symbol.	Equal to —	Symbol.	Equal to —
Ci.	Cirrus.	o	Overcast.
Ci.-S.	Cirro-stratus.	p	Passing showers of rain.
Ci.-Cu.	Cirro-cumulus.	q	Squally.
A.-Cu.	Alto-cumulus.	u	Ugly or threatening weather.
A.-S.	Alto-stratus.	v	Visibility of distant objects.
S.-Cu.	Strato-cumulus.	w	Wet or heavy dew.
N.	Nimbus.	●	Rain.
Cu.	Cumulus.	≡	Fog or mist.
Cu.-N.	Cumulo-nimbus.	⊕	Dew.
S.	Stratus.	◯	Solar corona.
Fr.-Cu.	Fracto-cumulus.	⊕	Solar halo.
Fr.-N.	Fracto-nimbus.	◑	Lunar corona.
Fr.-S.	Fracto-stratus.	◡	Lunar halo.
S.-cf.	Stratus-cumuliformis.	↘	Lightning.
N.-cf.	Nimbus-cumuliformis.	⊠	Thunderstorm.
M.-Cu.	Mammato-cumulus.	⊢	Thunder.
b	Clear, blue sky.	↙	Strong wind.
c	Partial clouds.	◠	Rainbow.
d	Drizzling or light rain.	∞	Dust haze.
g	Gloomy, or dark, stormy-looking weather.		

NOTE.—The intensity of any individual phenomenon may be distinguished by the figures of ° and ², which should be used as exponents of the symbols, so that ° indicates slight, and ² strong; e. g., ●° = slight rain, ●² = heavy rain. Figures in heavier type represent extreme values.

OBSERVATIONS FOR JANUARY, 1911.

DAILY GENERAL REMARKS.

1---Slight coloration of upper clouds at sunrise and sunset; ⊤° E in the evening.
2---Coloration of Ci. at sunset.
3---Light breeze in the afternoon.
4---●° at night.
5---Cloudy weather.
6---●° early in the morning and in the afternoon.
7---d° in the afternoon.
8---∞ in the forenoon.
9---Coloration of Ci.-S. at sunset.
10---Convergence of Ci. toward S in the morning.
11---Cloudy weather.
12---p° in the afternoon.
13---Overcast.
14---⌒ 7.30 a.
15---Coloration of Ci. at sunset.
16---Cloudy weather.
17---Fair weather.
18---Coloration of upper clouds at sunset.
19---Cloudy weather.
20---d°, coloration of upper clouds at sunset.
21---☌ early in the morning.
22---Cloudy weather.
23---○, p° in the afternoon.
24---● at night.
25---● in the early morning and in the afternoon; coloration of lower clouds at sunset.
26---Cloudy weather.
27---Coloration of upper clouds at sunset.
28---≡, ☌ early in the morning; coloration of upper clouds at sunset.
29---≡, ☌ early in the morning.
30---Coloration of clouds at sunrise.
31---Gentle breeze in the afternoon.

DAILY GENERAL REMARKS.

1---Coloration of upper clouds at sunset.
2---As yesterday.
3---As the preceding days.
4---☌ early in the morning; ● at night.
5---●° in the morning; d° in the afternoon; coloration of upper clouds at sunset.
6---Frequent d.
7---Light to gentle breeze in the afternoon.
8---Overcast.
9---Light to gentle ESE breeze in the forenoon and afternoon.
10---Coloration of upper clouds at sunset.
11---●° in the afternoon and night.
12---d° in the morning; d in the afternoon.
13---Overcast in the morning; cloudy in the afternoon.
14---Overcast.
15---Coloration of upper clouds at sunset.
16---Light breeze in the afternoon.
17---Coloration of upper clouds at sunset.
18---☌ early in the morning; gusty NNE winds in the morning and afternoon.
19---☌ early in the morning; gusty NEly winds in the forenoon and afternoon.
20---d° in the morning.
21---☇ in various points in the evening.
22---☌° early in the morning.
23---Coloration of upper clouds at sunset.
24---Cloudy weather.
25---Somewhat gusty E winds in the afternoon; coloration of upper clouds at sunset.
26---p° in the forenoon and afternoon.
27---Overcast in the morning, cloudy in the afternoon.
28---Light breeze in the afternoon.

DAILY GENERAL REMARKS.

1____Gusty N winds at night.
2____d° in the morning.
3____Slight coloration of upper clouds at sunset.
4____Light to gentle SEly breeze in the afternoon.
5____Somewhat gusty SSE winds in the afternoon.
6____Somewhat gusty SE winds in the afternoon.
7____As yesterday.
8____Gusty SE winds in the afternoon; coloration of Ci. at sunset.
9____Light breeze in the forenoon and afternoon.
10____Somewhat gusty WSW winds in the afternoon.
11____Light breeze in the afternoon.
12____☌, ◹ SE and SW quadrant in the morning; d in the forenoon and afternoon.
13____Gusty SE winds in the afternoon.
14____As yesterday.
15____Do.
16____As yesterday.
17____◹ NE quad. in the afternoon.
18____Somewhat gusty SWly winds in the afternoon.
19____◹° NE quad., ●° in the afternoon.
20____●, d in the morning.
21____Cloudy weather.
22____Fair weather.
23____Cloudy weather.
24____Do.
25____p in the forenoon and afternoon.
26____●° in the afternoon.
27____d° in the afternoon.
28____d° 12.45 p.
29____Gusty Ely winds in the forenoon and afternoon.
30____Somewhat gusty Ely winds in the morning and afternoon.
31____Cloudy weather.

DAILY GENERAL REMARKS.

1____Gusty SE winds in the afternoon.
2____Slight convergence of Ci. toward SE early in the morning.
3____Overcast.
4____d in the early morning.
5____Cloudy weather.
6____Fair weather.
7____☊ early in the morning.
8____Gusty ESE winds in the afternoon.
9____⌈↘° N quadrant, d°, gusty winds in the afternoon.
10____↘ NE quadrant at night.
11____Cloudy weather.
12____⊤ NE quadrant, ⌈↘° N by W in the afternoon.
13____Gusty SE winds in the afternoon.
14____● at night.
15____Somewhat gusty WSW winds in the afternoon.
16____Fair weather.
17____Cloudy weather.
18____∞ in the afternoon.
19____∞² in the afternoon; ● at night.
20____Overcast.
21____Do.
22____●° 2.25 p.
23____Somewhat squally weather, especially in the afternoon.
24____● in the early morning; p in the forenoon; somewhat gusty Wly winds, ○ in the afternoon.
25____☊° early in the morning; ⌈↘ SE quadrant, ◠, gusty WSW winds in the afternoon.
26____d°, ⌈↘ S quadrant in the morning; gusty WSW winds, ○°, p° in the afternoon.
27____● in the early morning, afternoon and night; gusty SW winds in the afternoon.
28____● early in the morning, d°, ⌈↘° NNE in the afternoon.
29____Somewhat gusty WSW winds in the afternoon.
30____● in the early morning; ⌈↘ various points in the afternoon.

DAILY GENERAL REMARKS.

1—d° early in the morning; squally in the afternoon, and especially at night.
2—Somewhat rainy weather, especially in the early morning.
3—●°, convergence of Ci. toward NNW in the morning; ⌈ E in the evening; ● at night.
4—○ in the morning and afternoon.
5—⌈ NE quadrant with occasional d° in the afternoon.
6—As yesterday.
7—● in the afternoon; ⌊ NW in the evening.
8—⌈ NE and SE quadrants in the afternoon.
9—Somewhat gusty WSW winds during the afternoon.
10—● in the early morning; ○² in the morning; gusty WSW winds at night.
11—○°, thundershowers in the afternoon.
12—● in the early morning and at night; ○° in the afternoon; ⌊ NE in the evening.
13—d in the early morning; ●, gusty SWly winds in the afternoon and at night.
14—Squally weather with strong gale from WSW at night.
15—Fresh to whole gale from WSW with ● at intervals.
16—Moderate and fresh SWly gale with ●, especially in the morning.
17—Rain squalls at intervals with some moderate and fresh SWly gale; ⌈° N in the evening.
18—●² in the morning; ● in the afternoon.
19—As yesterday.
20—Frequent ●, especially in the afternoon.
21—● in the morning and afternoon; gusty WSW winds in the afternoon.
22—Rainy weather; gusty SW winds in the afternoon.
23—Rainy weather, especially in the afternoon: T SW in the afternoon.
24—Gusty SWly winds at intervals with some ●.
25—As yesterday.
26—p, somewhat gusty SWly winds in the morning and afternoon.
27—d in the early morning; ◠ in the afternoon.
28—⌈° E quadrant, ⌊ various points, d in the evening.
29—⌈ E quadrant, d° in the afternoon.
30—ᵖ early in the morning; ○ in the afternoon; ●, gusty WSW winds at night.
31—● in the morning and afternoon with somewhat gusty SWly winds.

OBSERVATIONS FOR AUGUST, 1911.

DAILY GENERAL REMARKS.

1____Somewhat squally weather.
2____Rain squalls in the morning; d in the afternoon.
3____● in the morning and afternoon; ⊤ E 11.50 a. m.; gusty SW winds in the afternoon.
4____◠², d° in the morning; somewhat gusty SWly winds in the afternoon.
5____Ω early in the morning, somewhat gusty SWly winds in the afternoon.
6____Convergence of Ci. to the N by E at noon.
7____Somewhat gusty SWly winds in the afternoon and evening.
8____d° 11.47 a. m.; gusty WSW winds in the afternoon.
9____Gusty winds from WSW at intervals; ● 4.20 p. m.; ⌈◟° various points in the evening.
10____Gusty WSW at intervals with some d or ●°.
11____●° in the early morning; gusty WSW winds at intervals.
12____Somewhat gusty SWly winds at intervals with occasional p.
13____Rainy and somewhat squally weather at intervals.
14____Gusty SWly winds at intervals; ● in the early morning and at night.
15____● in the early morning; somewhat gusty WSW winds in the afternoon.
16____●, convergence of Ci. toward NNW in the morning.
17____⊤ N 8.55 a. m.; ● in the afternoon and at night.
18____◉ in the morning and afternoon.
19____As yesterday.
20____Continuous ● at night, and especially in the morning.
21____d° in the morning; somewhat gusty WSW winds in the afternoon.
22____Cloudy weather.
23____○ in the morning; ⌈◟ E, d° in the afternoon.
24____● in the afternoon and at night.
25____Continuous d in the morning; gusty W winds in the afternoon and at night.
26____Gusty SWly winds at intervals, with ● in the morning.
27____○² in the morning and afternoon; ●° at night.
28____●, gusty SWly winds in the morning and afternoon.
29____Somewhat gusty SWly winds at intervals; ● in the early morning and at night.
30____Gusty WSW winds at intervals; ● in the morning and afternoon; ⌈◟ N quadrant in the afternoon; ◟ NW in the evening.
31____◠, ● in the morning; ○ 2.15 p. m.; gusty SWly winds at intervals.

DAILY GENERAL REMARKS.

1---Gusty SWly winds at intervals; ○ in the morning and afternoon; ● in the afternoon.
2---Somewhat gusty WSW winds in the afternoon.
3---☌ early in the morning; somewhat gusty WSW winds in the afternoon and evening.
4---Somewhat gusty WSW winds in the afternoon.
5---As yesterday.
6---☌ early in the morning.
7---◹° NE quadrant, d° in the afternoon; ◺° S in the evening.
8---d°, p° in the afternoon.
9---●², ◹° N quadrant in the afternoon.
10---☌° early in the morning; p in the afternoon and at night.
11---d° in the morning; coloration of clouds at sunset.
12---◹° E quadrant, ● in the afternoon; coloration of clouds, ◺ NNW in the evening.
13---d°, ◹ NE quadrant in the afternoon.
14---◹ E in the afternoon, ● at night.
15---○ in the morning and afternoon; intense coloration of clouds at sunset; ◺ N in the evening.
16---○ in the morning and afternoon; gusty SWly winds in the afternoon.
17---Gusty SWly winds in the morning and afternoon with ● in the evening.
18---◹ NE quadrant with occasional ● in the forenoon and afternoon.
19---Thundershowers, especially in the afternoon.
20---Somewhat gusty SWly winds in the afternoon.
21---● in the early morning; thundershowers in the afternoon.
22---● in the early morning and afternoon.
23---┬ N quadrant, coloration of clouds in the evening.
24---☌ early in the morning; ◹ E quadrant in the afternoon.
25---Coloration of upper clouds at sunset.
26---Somewhat gusty WSW winds during the afternoon; coloration of clouds, ◹ NE in the evening.
27---Gusty winds from W backing gradually to SW; ● in the afternoon, and especially at night; ┬° N quadrant in the forenoon; ┬ SE in the afternoon.
28---Squally weather, especially in the morning.
29---Rain squalls in the morning; thundershowers in the afternoon.
30---d, ◹ NW quadrant in the early morning and afternoon.

OBSERVATIONS FOR OCTOBER, 1911.

ATMOSPHERIC PRESSURE, 700mm+.

DAILY GENERAL REMARKS.

1____Somewhat gusty SWly winds in the afternoon.
2____Convergence of Ci. toward NNW in the forenoon; coloration of clouds, ◟ N quadrant in the evening.
3____◸ E in the afternoon.
4____Coloration of clouds at sunset.
5____Convergence of Ci. toward SE in the morning and afternoon; coloration of clouds at sunset.
6____Overcast in general.
7____◸ NE quadrant in the afternoon.
8____┐° NW in the afternoon.
9____Coloration of upper clouds at sunset.
10____Coloration of clouds, ◟ NW in the evening.
11____◟ NW quadrant in the evening.
12____d in the forenoon; ◟ NNW in the evening.
13____● in the morning; coloration of upper clouds at sunset.
14____Ω early in the morning; ◠ in the morning and afternoon; ◸ E, convergence of Ci. toward NNE in the afternoon.
15____Ω² early in the morning; ◸ E quadrant in the afternoon; coloration of clouds, ◟ NNW in the evening.
16____◸ N quadrant in the forenoon.
17____●, ◸ NE quadrant in the afternoon; coloration of clouds at sunset.
18____d° in the forenoon and afternoon.
19____d in the early morning and afternoon.
20____Coloration of clouds at sunrise.
21____Overcast in general.
22____Fair weather.
23____d° in the morning; ● in the afternoon.
24____d°, ◠² in the afternoon.
25____d° in the morning.
26____Fair weather.
27____As yesterday.
28____As the preceding days.
29____Cloudy weather.
30____Do.
31____Do.

DAILY GENERAL REMARKS.

1____Cloudy weather.
2____Convergence of Ci. toward ESE in the morning and afternoon; coloration of clouds at sunset; ∪° in the evening.
3____Convergence of Ci. toward E in the afternoon; ∪ in the evening.
4____○, convergence of Ci. toward ESE during the morning; coloration of clouds at sunset.
5____☌ early in the morning; convergence of Ci. toward ESE during the morning and afternoon; ○° in the forenoon; coloration of clouds at sunset; ∪ at night.
6____Convergence of Ci. toward ESE in the morning; ○ in the forenoon and afternoon; intense coloration of clouds at sunset.
7____○ in the morning; $○^2$ in the afternoon; coloration of clouds at sunset.
8____Overcast.
9____Coloration of upper clouds at sunset.
10____Cloudy weather.
11____ Do.
12____Gentle Ely breeze in the afternoon.
13____As yesterday.
14____Cloudy weather.
15____d° 3.35 p. m.
16____Gusty Ely winds in the forenoon and afternoon.
17____Gusty ENE winds in the forenoon; coloration of clouds at sunset; ● at night.
18____● in the early morning; d° in the evening.
19____p° in the forenoon and afternoon.
20____Cloudy weather.
21____Coloration of upper clouds at sunrise.
22____Cloudy weather.
23____Fair weather.
24____Slight coloration of clouds at sunrise and sunset.
25____Fair weather.
26____Cloudy weather.
27____Fair weather.
28____Slight coloration of clouds at sunset.
29____Fair weather.
30____☌ early in the morning.

DAILY GENERAL REMARKS.

1---Cloudy weather.
2---∞ in the afternoon.
3---∞ in the afternoon; slight coloration of clouds at sunset.
4---Slight coloration of clouds at sunset.
5---Cloudy weather.
6---⊤° W quadrant in the afternoon.
7---Overcast.
8---d° 2.10 p. m.; somewhat gusty SW winds in the afternoon, backing to S at night.
9---◠, d° in the morning.
10---⊕, somewhat gusty SW winds in the afternoon.
11---Cloudy weather.
12---Some ●° in the morning and afternoon.
13---Gentle Ely breeze in the afternoon.
14---d°, coloration of clouds, ◠² early in the morning.
15---Gentle Ely breeze in the afternoon.
16---d in the forenoon; ● at night.
17---Cloudy weather.
18---Gentle SE breeze in the forenoon and afternoon.
19---d in the morning and afternoon.
20---d°, somewhat gusty ESE winds in the afternoon.
21---d° in the morning.
22---Cloudy weather.
23---Do.
24---Gentle Ely breeze in the forenoon and afternoon.
25---d°, ◠ in the morning.
26---Cloudy weather.
27---Somewhat gusty Ely winds in the forenoon and afternoon.
28---Overcast in general.
29---Cloudy weather.
30---Do.
31---d in the afternoon.

GENERAL SUMMARY FOR 1911.

MONTHLY AND YEARLY RESULTS OF METEOROLOGICAL OBSERVATIONS FOR 1911 AND COMPARISONS WITH THEIR NORMAL VALUES.

Annual summaries for first and second class stations, 1911	261

INTRODUCTION.

In this volume (Part III) of the report of the Weather Bureau for 1911 we publish the meteorological observations made in the various stations which at present constitute the meteorological service of the Philippines, a service established by Act No. 131 of the Philippine Commission May 22, 1901.

In Part II of the report for 1902, pages 52 to 60, will be found a detailed account of the establishment and organization of these branch stations and a list of the instruments with which they are equipped, according to their class.

The reports of the various observers are carefully collated and examined at the Central Observatory, but it is evident that the Directors cannot assume the full responsibility for the accuracy of these observations. As every meteorologist knows, in observations of this kind much must be left to the conscientious care of the observer. Hence, while we take this opportunity to express our confidence in our observers, we think it proper to subjoin the following list, which gives some particulars about the stations and also the names of the observers who are primarily responsible for the accuracy of the observations published in this volume (Part III) of the Annual Report of the Weather Bureau.

SECONDARY STATIONS AND OBSERVERS OF THE WEATHER BUREAU.

Town.	Province.	Island.	North latitude.	East longtitude.	Observer.	Class.
			° ′	° ′

REMARKS.

The hours of observation at the first and second class stations are 2 a. m., 6 a. m., 10 a. m., 2 p. m., 6 p. m., 10 p. m.; at the third and four class stations, 6 a. m. and 2 p. m. The time used is that of the one hundred and twentieth meridian east of Greenwich.

The barometer readings are reduced to sea level and 0° C., but no correction has been applied to eliminate the effect of gravity depending on the latitude of the place of observation.
